WHAT DO WE CONSUME?

- Our research taught us that **we consume plastic packaging the most in our daily lives.**
- We noticed that we threw away **a lot of drink cups or paper.**

- This is the amount of paper used **by one family** in a year.

- This is the amount of **plastic and PET bottles** used by people in the past year.

PROBLEMS IN DAILY LIFE

- We feel that disposable beverage cups are not environmentally friendly, because **beverage cups usually use paper or plastic as materials**. It takes about ten to **twenty years for the plastic to decompose naturally**.
- Even though there are **recycle bins** now, some people still discard them on the road because of convenience, which **affects traffic safety and even destroys the ecology**.
- I really enjoy this practices, although I am not used to it, it is okay to sacrifice myself for the earth.

SOLUTIONS TO THE PROBLEM

- After November 23 , we will **take our own bottle to buy the drinks**. It will last a week. We hope our action can **save five paper and plastic cups** trash to protect our Earth.

OUR IMPACT

- After a week, we no longer waste any drink cups. This is a great way to reduce waste, and it is very easy for people of this age.
- Pick up the eco-friendly cup and go to the beverage store to buy drinks, and they will encourage people with preferential prices.

EXPERIENCE FEELINGS

- Our Earth was full of beauty before, but now there is a lot of trash everywhere, and **the temperature is getting hotter and hotter.**
- What can we do for the earth?
 - 1. recycle trash**
 - 2. Not use too much electricity**

OUR REPORT IS FINISHED

THANK YOU FOR LISTENING

- It is everyone's responsibility to care for the environment.
- Don't destroy the environment just for convenience.
